

FAQs

DocuCopy® RC 30 Recycled Tabs

Q. What paper is used as the base stock for RC 30 Tabs?

A. RC 30 Tabs are manufactured out of a high quality, 93 bright white, 30% post-consumer recycled fiber stock.

Q. Is this product FCS or SFI certified?

A. Certified product is available as a special order product.

Q: Will RC 30 Tabs work as well as regular DocuCopy® Tabs, what's the difference?

A: There is only one difference, a 30% recycled paper. The paper is a little bit heavier and thicker than 90# index paper which is the stock used for regular DocuCopy® Tabs. All the quality features that are incorporated into regular DocuCopy® tabs are in RC 30 Tabs.

Q: What items are available in the RC 30 version?

A: The 4 most popular items are available- 5th cut, reverse and straight collated, with no holes or 3 hole punched, with plain paper tabs.

Q: Will they run on the same equipment as regular tabs?

A: Yes, they will run on any equipment that is *tab capable*. See the complete Tab Capable Equipment List at www.docucopyproducts.com

Q: Are custom orders available using the RC 30 stock?

A: Yes-ask about the format your customer is interested in.

Q: Why don't RC 30 Tabs have Trilar® tabs?

A: RC 30 Tabs are manufactured without any polyester film lamination so they are completely and easily recycled. Because the paper is a bit heavier it stands up better to heavy use.

Q: How are the RC 30 Tabs packaged?

A: RC 30 tabs are packed in the same quantities as regular DocuCopy® Tabs. Five inner sealed boxes (250 sheets each) in a shipping (1250 sheets per case).
